

Public Health Reports.

(Formerly "Abstract of Sanitary Reports.")

TREASURY DEPARTMENT, *United States Marine-Hospital Service.*—Published in accordance with act of Congress approved February 15, 1893.

VOL. XI.

WASHINGTON, D. C., JANUARY 10, 1896.

No. 2.

UNITED STATES.

[Reports to the Supervising Surgeon-General Marine-Hospital Service.]

Smallpox in Arkansas.

LITTLE ROCK, ARK., *January 4, 1896.*

SIR: I have the honor to report as follows concerning the smallpox in Arkansas: No new cases have been reported in Mississippi County since my last report. One case is reported at Surrounded Hill, a post village in Prairie County, 16 miles southeast of Des Arc, the county seat, and 52 miles from Little Rock, on the Little Rock and Memphis Railroad. The case is that of a negro, who is supposed to have contracted the disease either in Memphis, Tenn., or from the cases in Mississippi County, this State. There is one case in Argenta (North Little Rock) in the person of a negro child. On the 14th of December last a negro woman came to Argenta via the Little Rock and Memphis Railroad, her destination being some point on the Little Rock and Fort Smith Railroad, which was not known then and has not been ascertained since. While waiting for the departure of her train she visited the house of a negro family in Argenta, complained of being sick, and asked to be allowed to lie down until time to take her train. When she was leaving the house it was discovered that she had an eruption upon her face. The negro child, who now has the disease, occupied the bed which had been used by this woman. In view of the source of contagion it is probable other cases will occur along the route taken by the infected woman.

Every precaution is being taken by the authorities to confine the contagion to its present limits.

Very respectfully,

L. P. GIBSON,
Acting Assistant Surgeon, M. H. S.

Smallpox in Tennessee.

NASHVILLE, TENN., *January 3, 1896.*

SIR: I inclose you herewith a statement giving the number of cases of smallpox reported to this office during the period from December 15, up to and including December 31.

Owing to the fact that Tennessee has no vital statistics law, we are unable to furnish you with further accurate data relative to prevalent diseases in this State.

Very respectfully,

J. BERRIEN LINDSLEY, M. D.,
Secretary and Executive Officer.

From December 15, up to and including December 31, there occurred in Memphis 17 cases of smallpox, 16 colored and 1 white.

In Shelby County, during the same period, there occurred 13 cases of smallpox, 9 colored and 4 white; and at Alamo, Crockett County, there occurred 6 cases of smallpox, all colored.

Smallpox in Memphis, Tenn.

MEMPHIS, TENN., December 31, 1895.

SIR: I have the honor to report with reference to the smallpox in this city that 22 cases and 2 other suspected cases have arisen in the city and suburbs since December 14, the date of my last letter on the subject. In these cases 2 of the patients were white and the others colored. The disease is kept well in hand, and the number of new cases appears to be diminishing at present.

Very respectfully, yours,

A. C. SMITH,
Passed Assistant Surgeon, M. H. S.

Immigration during 1895.

ELLIS ISLAND, NEW YORK HARBOR, January 6, 1896.

SIR: Inclosed please find a statement showing the number of passengers, both cabin and steerage, landed at the port of New York during the calendar year 1895. It should be borne in mind that fully 20 per cent of the steerage passengers are residents of the United States returning to this country, and the actual number of immigrants would, therefore, be about 200,000.

Very respectfully,

W. A. WHEELER,
Surgeon, M. H. S.

Table showing the number of steerage passengers landed at Ellis Island during the year 1895; also cabin passengers landed at the port of New York.

* Previously reported.

Two vessels inspected and passed.

PORT TOWNSEND QUARANTINE.

Week ended December 14, 1895.

Five vessels inspected and passed.

Week ended December 21, 1895.

Three vessels inspected and passed.

Week ended December 28, 1895.

Three vessels inspected and passed.

REEDY ISLAND QUARANTINE.

Week ended December 29, 1895.

Twenty vessels inspected and passed.

SAN DIEGO QUARANTINE.

Week ended December 25, 1895.

One vessel inspected and passed.

SOUTH ATLANTIC QUARANTINE.

Week ended December 28, 1895.

One vessel inspected and passed.

SOUTHPORT QUARANTINE.

Week ended December 28, 1895.

Four vessels inspected and passed.

Reports of States and yearly and monthly reports of cities.

CONNECTICUT—*Meriden*.—Month of December, 1895. Estimated population, 28,500. Total deaths, 32, including phthisis pulmonalis, 4; diphtheria, 1; and whooping cough, 1.

Westport.—Month of December, 1895. Estimated population, 4,000. Total deaths, 4. No deaths from contagious diseases.

DELAWARE—*Wilmington*.—Year ended December 31, 1895. Estimated population, 70,000. Total deaths, 1,198, including phthisis pulmonalis, 127; enteric fever, 27; scarlet fever, 2; diphtheria, 12; measles, 5; and whooping cough, 9.

FLORIDA—*Pensacola*.—Month of December, 1895. Estimated population, 15,000. Total deaths, 19, including phthisis pulmonalis, 4; and enteric fever, 1.

GEORGIA—*Columbus*.—Month of December, 1895. Estimated population, white, 10,276; colored, 9,027; total, 19,303. Deaths, white, 4; colored, 15; total, 19, including phthisis pulmonalis, 2; and measles, 4.

MICHIGAN.—Week ended December 28, 1895. Reports to the State board of health from 50 observers indicate that erysipelas, intermittent fever, scarlet fever, inflammation of kidney, remittent fever, and diarrhea increased, and pleuritis and typhoid fever decreased in area of prevalence. Phthisis pulmonalis was reported present during the week at 187 places, enteric fever at 45, scarlet fever at 31, diphtheria at 29, whooping cough at 14, measles at 9, and small-pox at 1 place—Detroit.

NEW YORK.—Month of November, 1895. Reports to the State board of health from 8 districts, including New York City, Brooklyn, and 153 other cities, towns, and villages, show a total 8,372 deaths, including phthisis pulmonalis, 979; enteric fever, 204; scarlet fever, 51; diphtheria and croup, 483; measles, 96; and whooping cough, 57.

The Monthly Bulletin says:

November is invariably the month of lowest mortality of the year, the average number of deaths daily for the month being for the past ten years 280, which is the average for this present month, that of the preceding ten months of 1895 having been 340. There were 200 more deaths than in November, 1894. There was an annual death rate per 1,000 population of 15.50. The infant mortality (under five years of age) was 27.4 per cent, which is the same as that of the corresponding period for the last two years, that of October having been 31.5. The zymotic mortality has decreased from 16.7 per cent of the total deaths to 13.5, and is below the average for this month. Compared with last November the deaths from diphtheria are much less, being 5.8 per cent of the total against 8.5; there has been a smaller increase than usual since October. From other zymotic diseases the mortality is almost identical with that of a year ago, except from measles, which shows a marked increase, and to a less degree from typhoid fever and malarial diseases. There were 96 deaths from measles, which is double the number reported in October; it has been especially prevalent in New York, Brooklyn, and Albany, in which 74 of the deaths occurred. From typhoid fever there were in the five cities of over 100,000 population 2.4 deaths per 100,000 population; in the rest of the State there were 4. From diphtheria there were 9 deaths per 100,000 population in these large cities; in the rest of the State there were 5. There were 17.2 deaths per 100,000 population in the large cities from consumption, against 12 in the rest of the State. June and November have fewer deaths from this cause than other months of the year. Deaths from acute respiratory diseases are nearly double the number occurring in October, though not above the average for this month.

NORTH CAROLINA.—Month of November, 1895. Reports to the State board of health from 30 towns, having an aggregate population of 155,585 (white, 90,822; colored, 64,763), show a total of 183 deaths (white, 95; colored, 88), including phthisis pulmonalis, 42; enteric fever, 12; scarlet fever, 1; diphtheria, 2; measles, 2; and whooping cough, 2.

PENNSYLVANIA—*Pottsville*.—Two weeks ended December 31, 1895. Estimated population, 14,000. Total deaths, 6, including phthisis pulmonalis, 1; and diphtheria, 1.

West Chester.—Month of December, 1895. Estimated population, 9,000. Total deaths, 8, including 1 from phthisis pulmonalis.

VIRGINIA—*Lynchburg*.—Month of December, 1895. Estimated population, 30,000. Total deaths, 30, including phthisis pulmonalis, 3; and enteric fever, 1.

TENNESSEE.—Month of November, 1895. Reports to the State board of health from 5 cities and towns, having an aggregate population of 157,875, show a total of 266 deaths, including phthisis pulmonalis, 40; smallpox, 2; enteric fever, 10; and scarlet fever, 2.

BRAZIL.

*Sanitary report of Rio de Janeiro.*RIO DE JANEIRO, *December 3, 1895.*

SIR: I have the honor to transmit report for the week ended November 30, 1895:

There were 8 deaths from *accessio pernicioso*, a decrease of 9; 18 from yellow fever, the same as in the foregoing week; 36 from smallpox, a decrease of 13; 1 from beriberi, a decrease of 2; 8 from enteric fever, an increase of 6; 51 from tuberculosis, a decrease of 9; and none from the other causes in the previous weeks. From all causes there were 323 deaths, a decrease of 41.

Yellow fever.—This disease appears to be stationary, and is not yet considered epidemic, though there are more cases than usual at this time of the year.

Smallpox.—This disease is declining slowly, and I believe it will not be long before it becomes nearly extinct. Telegrams from the line of the railway, on the 26th, and since that day, state that cases are appearing in the neighborhood of kilometer 73. Fevers of a malicious character are reported at Araraquara in S. Paulo, and medical aid has been sent there.

Since last report the following-named ships have been inspected and received bills of health from this office: November 26, barkentine *Glad Tidings*, American, for Baltimore, Md.; November 27, steamship *Liebnitz*, Belgian, for New York, N. Y.; November 28, barkentine *Arthur C. Wade*, American, for Barbados, West Indies; November 30, steamship *Endeavour*, British, for New York, N. Y.

Respectfully, yours,

R. CLEARY, M. D.,
Sanitary Inspector, M. H. S.

CUBA.

*Report on the condition of health in Santiago during 1895.*SANTIAGO DE CUBA, *December 28, 1895.*

SIR: I have the honor of submitting the following general report for the year about to expire:

Since the breaking out of the war (February 24) the mortality for this city has been very high, and never during twenty-four years' practice of medicine in this city have I observed so many cases of contagious diseases as we have had during the year. The cause of this is obvious—in the first place, war, with all its accompanying horrors; the agglomeration of the poor population of the surrounding country in a city too small to contain them; and lastly, the arrival of over 100,000 unacclimated men badly clothed and nourished, and suffering from the fatigue and exposure consequent upon a tropical campaign.

The mortality for Santiago de Cuba in normal times is about 2 per 1,000 monthly; from the month of March up to date it has gradually increased until it reached as high as 12 and 15 per 1,000 inhabitants monthly. The total number of deaths from all causes, as shown by the cemetery records up to December 27, reached the enormous figure of 6,203. Yellow fever, which broke out soon after the arrival of the new troops, has caused in all a total of 667 deaths. I do not believe, how-

ever, that this number of deaths covers all the cases of yellow fever, as a great many die outside the city and are buried in the surrounding country, and we can not keep trace of them, nor will it be easy to predict when the epidemic will end, as our winter is a very short one and not cold enough to prevent the disease from spreading and attacking the newly arrived troops, which keep coming as fast as the mother country can send them.

Another source of danger and disease is the want of barracks sufficiently large to provide accommodation for those that come. Large bodies of men are continually quartered in a custom-house shed close to the seashore and very near the shipping.

The want of cleanliness in person and dress, proverbial in the Spanish soldier; his profound ignorance of the laws appertaining to the preservation of health, makes him a constant source of danger to himself and to others. Many are taken sick in this shed and carried to the hospital, leaving behind them the germs of yellow fever, which, carried by the air to the surrounding vessels, make them liable to become the source of future infection for their crews.

The shipping has so far escaped the contagion of yellow fever, but this is partly owing to the small number of vessels (sailing) which have visited us, but, as the sugar crop is about to be started, I am sure the number will increase, and then I shall have to keep a very close watch upon their sanitary condition.

I am, sir, respectfully,

HENRY S. CAMINERO,
Sanitary Inspector, M. H. S.

EGYPT.

Cholera in Egypt.

[December 6-December 18, 1895.]

[Transmitted by JAMES F. LOVE, M. D., Alexandria, Egypt.]

Places.	New cases.	Deaths.	Places.	New cases.	Deaths.

GIBRALTER.

Quarantine notice.

GIBRALTAR, *December 14, 1895.*

With reference to the board of health notice of the 12th instant, the restrictions regarding passengers are removed.

By order.

JOHN C. KING,
Secretary to the Board.

MEXICO.

One case of smallpox in Nogales.

NOGALES, ARIZ., *December 31, 1895.*

SIR: I have the honor to report 1 death from smallpox in Nogales, Mex. No new cases.

Very respectfully,

W. F. CHENOWETH,
Sanitary Inspector, M. H. S.

RUSSIA.

*Cholera and cholera in Russia.*ST. PETERSBURG, *December 16, 1895.*

SIR: The latest official returns show that in the city of St. Petersburg, from December 7 to December 14, there were 78 cases of cholera, with 46 deaths, 58 patients remaining under treatment in the hospital.

Cholera.—In government of Volyn, from November 24 to November 30, 130 cases, 90 deaths; in government of Kiev, from November 24 to December 7, 118 cases, 51 deaths; in government of Orel, from December 1 to December 7, 1 case; in government of St. Petersburg, from December 1 to December 7, 21 cases, 2 deaths.

JOHN KAREL,
United States Consul-General.

STATISTICAL REPORTS.

CUBA—*Havana.*—Under dates of December 28, 1895, and January 4, 1896, the United States sanitary inspector reports as follows:

There were 111 deaths in this city during the week ending December 26, 1895. Two of those deaths were caused by yellow fever, with approximately 5 new cases; 6 were caused by enteric fever, 4 by so-called pernicious fever, 1 by paludal fever, 1 by diphtheria, 7 by enteritis, 1 by smallpox, 7 by pneumonia, and 1 by the grippe. The 2 deaths caused by yellow fever during the week occurred in the Military Hospital.

There were 550 deaths in this city during the month of December, 1895. Twenty-two of those deaths were caused by yellow fever, 18 by enteric fever, 10 by so-called pernicious fever, 4 by paludal fever, 3 by diphtheria, 33 by enteritis, 6 by dysentery, 1 by bilious fever, 1 by cholera-infantum, 3 by smallpox, 20 by pneumonia, 1 by the grippe, and 3 by glanders.

During the week ending January 2 there were 129 deaths, 3 of which were caused by yellow fever, with approximately 7 new cases, 2 were caused by enteric fever, 2 by so-called pernicious fever, 1 by paludal fever, 1 by diphtheria, 4 by enteritis, 2 by dysentery, 1 by bilious fever, 2 by smallpox, 5 by pneumonia, and 1 by the glanders.

The 3 deaths during the week ending January 2 from yellow fever occurred in the Military Hospital.

FRANCE—*Roubaix.*—Month of November, 1895. Estimated population, 120,000. Total deaths, 181, including enteric fever, 1; diphtheria, 3; and whooping cough, 1.

Rouen.—Month of November, 1895. Estimated population, 111,847. Total deaths, 219, including phthisis pulmonalis, 45; enteric fever, 26; diphtheria and croup, 43; scarlet fever, 1; and whooping cough, 1.

GREAT BRITAIN—*England and Wales.*—The deaths registered in 33 great towns of England and Wales during the week ended December 21 correspond to an annual rate of 18.6 a thousand of the aggregate population, which is estimated at 10,591,530. The lowest rate was recorded in Croydon, viz, 13.6, and the highest in Liverpool, viz, 27.5 a thousand.

London.—One thousand five hundred and twenty-one deaths were
